## FOREWORD

In an effort to facilitate efficient planning and management throughout the Agricultural Sector, the Ministry of Agriculture and Natural Resources, through its Agricultural Planning Unit is endeavouring to establish a comprehensive agricultural information system. A two-prong approach is being used to realize the objective:

- (1) To focus on the compilation and storage of available data for easy retrieval, making use of Computer Technology.
- (2) To concentrate improvement of the methodology for the collection and compilation of statistical information as well as the broadening of the range of information being collected.

The overriding aim is to provide useful and timely information to meet the needs of the specific target groups such as policy-makers, technical staff, farmers and private sector groups.

This publication represents initial efforts to consolidate data relating to Barbados Agricultural Trade.

We are greatly indebted to the Inter-American Institute for Coöperation on Agriculture (IICA) for the invaluable cooperation given in the preparation of this document. We would also like to thank the Department of Statistical Services without whose assistance preparation of this document would not have been possible.
